- Local POTS/Analog
- Multi-Carrier Network

## LOCAL VOICE SERVICE

### Answering All of Your Communication Needs

If your business requires analog, digital T1 or PRI local and long distance service, Fusion has the right voice solution to meet your particular business application. We offer Local Voice T1s, PRIs, and Analog/POTS services from a number of providers as well as our own originated and terminated service.

### Local T1/PRI

Required by traditional PBXs and circuit switched connections, TDM still functions as the backbone of many corporate phone systems. Fusion Local Voice T1s and PRI circuits are available from a number of carriers nationwide to serve legacy infrastructure needs. Connected by leased lines to the PSTN, these legacy networks consistently offer the high reliability and call quality of traditional, business-grade telephony. Both Digital T1-CAS and ISDN-PRI termination are available.

### Local POTS/Analog

POTS phone lines are the necessary complement to most VoIP implementations to carry traditional faxing or alarm traffic. POTS is also commonly used for redundancy and emergency calling. Unlike most VoIP-only providers, Fusion delivers these traditional services nationwide and offers a true single-source solution.
