

## FEATURES & BENEFITS

- Enterprise Infrastructure
- Enterprise Support
- Enterprise Expertise
- Engineered by industry veterans
- Uses industry leading Asigra software
- All major Microsoft operating systems
- Agentless backup architecture
- Military grade security
- Continuous data protection
- AES-256 Disk Safe encryption
- Bare-metal restore

## Fusion Backup & Recovery

### Secure Your Data

Fusion Backup & Recovery is an enterprise-class backup software solution that provides a single, integrated approach to data protection that covers you against all data-loss scenarios. Its complete range of tools and capabilities ensure you can securely protect more data while using less network and storage resources, without having to deploy multiple point solutions. This agentless solution allows you to have peace of mind in case of a data disaster.

### Backup your data quickly

- Backup takes only a few minutes
- Incremental backups done at block level
- Server backups can run as often as every 15 minutes

### Simplifies cloud backup

- Fast download & install to be up and running in minutes
- No IT expertise or professional services required

### Compatibility with any environment

- Physical, Virtual, Windows or Linux
- Microsoft SQL Server, Exchange Server, and MySQL Server
- RedHat, CentOS, Ubuntu, Debian, Suse & most custom Linux kernels

### Scalable to support all devices

- Extensible architecture allows for adding repositories as you grow

### Superior security and encryption

- Data transferred offsite using FIPS 140-2 certified encryption technology via public or private cloud
- Data stored in compressed and encrypted format
- Digital signature for every file and block of data
