

## FEATURES & BENEFITS

- Enterprise Infrastructure
- Enterprise Support
- Enterprise Expertise
- Engineered by industry veterans
- 100% brandable agent
- Smart alerting for data usage
- Multiple folder backup
- Granular user-access and security controls
- Revised file backup
- Windows and OSX agents

## Fusion Rootsyc

### Secure File Sharing

Fusion Rootsyc is a file sharing solution that provides an easy way for your business to share and sync important data across multiple platforms, while keeping security a main priority. This solution offers unmatched security- with its military grade, 448-bit Blowfish encryption- while still maintaining a high level of flexibility that allows you file access from anywhere, on any device. Sharing, restoring, and collaborating have never been easier.

### Universal file access

- No more depending on FTP's, VPN's or file servers
- Access your files at home, in the office, or on any mobile device

### 448-bit encryption

- Highest level of security for any cloud file sharing platform
- Ensures that your sensitive documents are safe from hacking breaches

### Encryption management

- Encryption key is exclusive to your business and documents
- Persistent and transient encryption key modes on the server

### Complete control of access

- Allows you to perform remote wipes of desktops, former employees, etc.
- Remote wipes of endpoints and mobile devices
- Comprehensive usage reports

## Key Benefits

### Managed file sharing for internal/external parties

- Tape backups are expensive and vulnerable to disaster, not to mention slow in comparison to cloud backup. Our solution ensures your peace of mind.

### Centrally administered, multi-tenant dashboard

- Keep all of your data, whether its presentations or spreadsheets, with you wherever you go. Freedom to work from smart phones, tablets, desktops, the web, and laptops. Anytime a file is updated, it will be updated across all

## How it Works

The platform is comprised of two services: server and agent. The server service can be hosted within a company's internal infrastructure or may be provided by Rootsinc's hosted cloud infrastructure. The agent can be deployed to a multitude of endpoints, including desktops, laptops, and servers.

### Fusion vs. the Others
