Add services, usage bundles and applications to your Fusion Voice service as your business evolves.

Team Up With Fusion and Give Your Law Practice a Unique Strategic Advantage

Why Fusion for Law Firms?

Our solutions for the legal sector are specifically designed to support the communications and collaboration requirements of your firm, meeting today's and tomorrow's needs.

When it comes to security, data discovery and retention, the business fundamentals of today's leading law firms are uncompromising. For more than 20 years, Fusion has helped private practices and top 20 US law firms overcome these challenges. By providing a complete, future-proof and secure solution, Fusion enables practices to maximize billable hours by connecting and collaborating with staff and clients faster, and more easily, without spending a fortune in capital expenses.

Fusion Cloud Solution Benefits

- Connect multiple locations with a single phone solution using FusionWorks. All staff members can use simplified extension dialing via unique DID's regardless of country, time zone or office location. Your team is reachable even when visiting clients or away from the office.
- Voicemail-to-text gives you the ability to quickly scan and read your voicemail messages on your mobile phone, tablet or PC when listening isn't an option.
- Keep your staff in touch with each other without expensive IT integration. The convenience of the Fusion Communicator and our FusionWorks solution, brings secure Instant Messaging to the law practice that doesn't require any costly integration with 3rd party applications.

“We considered buying and maintaining the phone system we had been using at the larger firm, but the total cost of ownership was way too high. Fusion was the only provider that could deliver a complete solution with the functionality we required and implement it according to our tight schedule and all without costing us a fortune in capital expense.”

- Timothy Back, IT Manager, Panitch Schwarze Belisario & Nadel

Be Connected: Anytime, Anywhere Always

- Provide flexible off-site voicemail storage, or deliver all voicemails as email, allowing for the data storage policy and e-discovery process appropriate to your specific needs.
- The Executive Assistant functionality allows for timely office support. Office assistants may use shared call appearance to allow them to answer a manager's call and/or send it to their voicemail with one easy step.
- IP Fax simplifies sending and receiving faxes by leveraging the power of email and our dedicated faxing portal. The best part: there is no additional hardware needed for the feature to work.
- Now available on MacOS, Windows, iOS and Android, Fusion Communicator provides secure messaging, presence, one-touch conferencing and desktop collaboration without the hassle of traditional multi-vendor solutions. With simplicity in mind, Fusion Communicator enables attorneys, legal assistants, and outside experts to collaborate efficiently and effectively without time and travel expenses.

Work Smarter

- Protect client data and the firm from outside threats with comprehensive network security solutions.
- On demand, or always on call recording, real-time monitoring and reporting capabilities are built into the complete solution, increasing productivity.
- Physical redundancy is combined with our network-based intelligent routing solutions to deliver a reliable, fully automated failover solution.
- Painlessly add new office locations with fully hosted solutions enabling your business to scale without the hassle of managing upgrades, new location installations or system maintenance.
- On-site or Fusion-provided call recording storage, to best match your data discovery requirements.
- Gain operational efficiencies while reducing overall costs within the business.

Fusion Cloud Solutions

- FusionWorks: Powerful communications with the integration of voicemail, web collaboration, video, instant messaging and presence, fax and phone service.
- Fusion Cloud Security: Managed firewalls to Stealth Cybersecurity.
- Fusion Cloud Connectivity: from T1 to GigEthernet, dedicated circuits or MPLS mesh networks.
