

Dedicated Internet Access (DIA)

Nationwide High-speed Dedicated Internet Services

All Businesses Depend on the Internet. But, One Size Does Not Fit All

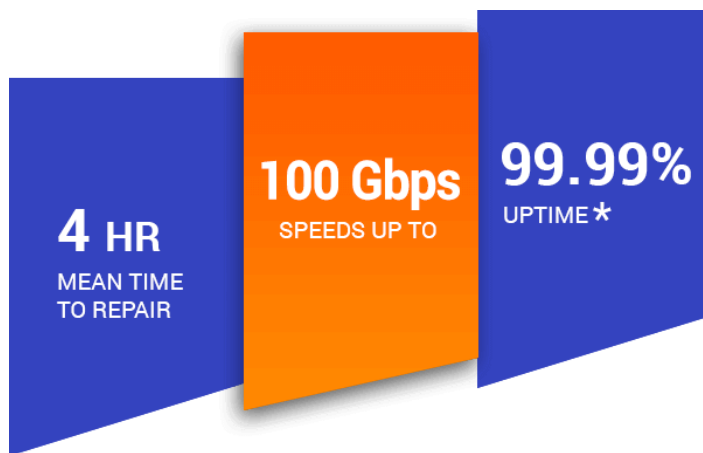

Customized to Suit Your Business Needs

Fusion Connect provides a complete set of Dedicated Internet Access (DIA) products for your business needs. Allowing for nationwide coverage, flexible and scalable bandwidth, and industry-leading Service Level Agreements (SLAs). Our DIA solutions include Fiber Optic, Symmetrical Business Ethernet, and T1 / Bonded T1 services (see next page for details).

Secure and Reliable Connection Speeds

DIA is a private connection between your business and the web. Unlike typical shared broadband services, the fiber or copper connection is dedicated to your business. DIA services don't compete with other subscribers for bandwidth usage. Enjoy symmetrical upload and download speeds: this means your upload speeds are just as fast as your download speeds.

Fusion Connect's industry-leading service guarantees covers 99.99% uptime and a 4 hour mean time to repair.

*Depending on service type and addition of Failover services.

If you need reliable and consistent bandwidth speeds, prioritized technical support, and guaranteed uptime, the investment in Fusion Connect dedicated internet access is more than worth it.

Fiber Optic Internet

Speeds up to 100x100 Gbps

Fiber Optic Internet, sometimes called Fiber Optic Cable Internet, is the transmission of data by light signals that travel on a fiber encased in a cable. Unlike copper telephone lines used for broadband internet services, fiber optic cables can carry large bundles of information at one time. Fast speeds – up to 100 Gbps – support business-critical application performance.

- High-capacity bandwidth handles streaming media and large upload/download transfer demands faster
- Symmetrical speeds provide dependable and consistent data throughput
- Enjoy faster speeds over much longer distances that DSL and Cable services can provide
- A great service option to power Business VoIP service: crystal-clear video and voice communications

Business Ethernet Service

Speeds up to 100x100 Gbps

Ethernet is ideal for businesses with demanding, mission-critical data access needs. Easily using your existing infrastructure, Ethernet is great for a geographically dispersed workforce with VPN.

- 99.9% or better uptime guarantee (99.99% with Failover)
- Symmetrical Speed Options: 1, 2, 5, 10, and 100 Gbps; 2, 3, 10, 15, 20, 45, 50, 100, 200, 250 and 500 Mbps

T1 Internet & Bonded T1

Speeds up to 12x12 Mbps

T1 Business Internet service handles bandwidth-intensive apps like VoIP and streaming media. Fusion Connect facilitates the professional installation and setup of your T1 service. T1 and Bonded T1 can be a perfect fit if your office location is harder to reach by other services.

- Dedicated symmetrical connections
- 99.99% uptime SLA
- T1 speeds are 1.5, 3.0, 4.5, 6.0, 7.5, 9.0, 10.5, and 12.0 Mbps

THE FUSION CONNECT ADVANTAGE

ENABLING THE CONNECTED ENTERPRISE

Optimize your business communications, costs, and continued collaboration from any place or device, with crystal-clear quality. Securely connect your business locations and remote workers.

LEADING-EDGE TECHNOLOGY

Fusion Connect's optimized platforms leverage leading technologies, meaning seamless integration of solutions across your virtual and fixed technology platforms.
