

Fusion SIP

Enjoy the Benefits of Voip While Extending Your PBX Investment

Grows with Your Business

Fusion Connect SIP Trunking is a trunk replacement service that allows you to augment your existing phone system and leverage the power of unique, cloud-based features. Fusion SIP Trunking may be deployed over your existing IP and broadband network or bundled with Fusion Connect Broadband and MPLS services. Uniquely, Fusion SIP is offered either in static or dynamic configuration to meet your specific PBX needs and match your usage patterns.

Reduced Costs

Fusion SIP has enabled thousands of businesses of all sizes to save money, by eliminating PRI trunks, analog lines and reducing hardware costs. With pricing plans optimized for your application, we'll help you maximize your phone savings.

Advanced Routing

Fusion SIP maximizes routing flexibility and reliability. Distribute your calls across multiple sites as if they were one. Or, route inbound calls based on business rules customized for specific DIDs or DID group. You may also reconfigure these rules via our centralized online portal, fully leveraging cloud-based routing and feature management.

Business Continuity

With Fusion SIP, your business is always reachable. Business continuity is built into our service at the network level to address overflow calls, IP issues or PBX failures. From day one, harden your telephony solution by selecting from our various business continuity and failover options.

Services & Equipment

Flexible pricing is based on voice paths, local/long distance plans, and capacity allocation. Call paths may either be configured as static (fixed calling capacity for a given location) or dynamic (when calling capacity is required during peak times or across multiple locations). Call Bursting is a feature that gives you the ability to use additional call sessions beyond the amount purchased for peak calling times.

SIP Trunking Portal

An optional feature that allows admin users to change how calls are routed as needed immediately, for business continuity or capacity planning purposes. You can create, manage, and maintain DID Groups, Trunk Groups, Call Routes, and Trunk Plans. This portal offers real-time routing combining advanced planning features with enhanced and easily implemented functionality.

Fusion Connect SIP Features

- **BTN:** Single 10-digit DID for inbound and outbound call placement. Includes E911 services, a single directory listing, and a single outbound caller name setup. The default CNAM config is the company name.
- **Call Logs:** Call logs are available on the customer's monthly invoice or by request.
- **Call Waiting:** Notifies call recipient of a second call while a call is already in progress. Allows switching between calls.
- **Directory Assistance:** Local Directory Assistance available.
- **Directory Listings:** Includes the registration of the BTN with the National Registry Database. Additional directory listings are available as optional add-ons.
- **Enhanced 911 (E911):** Fusion Connect provides 911 routing to the local emergency dispatch center.
- **Inbound Calling:** Inbound calling allows for receiving calls from the PSTN or other Fusion Connect users.
- **Inbound Caller Number:** Caller Name will be sent from the Fusion Connect network to the called number as requested.
- **Local Outbound:** Outbound local calling includes all outbound calls local to the caller as defined by the LCAD database for Telecordia. 7-digit dialing supported.
- **Long Distance (Domestic & International):** Long-distance calls may be made to any destination in the world outside your local calling area. Local + LD Fusion SIP Trunks and Minute Bundles are available that include unlimited Domestic Long Distance Calling within the continental United States and Canada.
- **Outbound Caller Name:** Includes the setup of one Caller Name associated with the BTN. Additional Caller Name setup available as optional add-ons.
- **Outbound Caller Number:** Caller Number will be sent from the Fusion Connect network to the called number as provided by your equipment.

THE FUSION CONNECT ADVANTAGE

ENABLING THE CONNECTED ENTERPRISE
