

# Wireless Broadband

## Secure LTE, 4G, and 5G Nationwide Access

### Remote Access

If your business has branch offices, retail stores or restaurants, or any other type of locations that do not have access to dedicated fiber or cable, Fusion Connect Wireless Broadband provides always-on, high-speed connectivity to the internet and your corporate VPN.

### Redundant Access

If you have Dedicated or Shared Broadband Internet Access today, Wireless Broadband is the perfect backup should you experience disruptions in your existing fiber- or copper-based service.

Wireless Broadband doesn't use the same last-mile local loop facilities as terrestrial broadband access services do. This way it can provide complete redundancy. Unlike dial-up backup, Wireless Broadband gives your employees access to the Internet and your corporate VPN at broadband speeds.

### Quick Connectivity

If you've ordered terrestrial broadband connectivity, there's no need to wait until it's connected to provide access to your users. Use Fusion Connect Wireless Broadband as a temporary access method while you wait for your circuit to be delivered.

It takes a fraction of the time to configure and install compared to traditional wireline connections. This makes it easy to setup and use at one-time short-term events, like conferences or festivals, where other internet access options don't make sense.

### Availability to Keep Working

Fusion Connect Wireless Managed Failover automatically detects access issues with wireline connections and diversifies your Internet and network connectivity with wireless broadband service.

**Subscribe to Fusion Connect Wireless Managed Failover Service and increase the availability service level agreement (SLA) for your Fusion Connect primary connectivity solution.**

## Secure Access at Broadband Speeds

Fusion Connect Wireless Broadband is a good fit:

- For remote or rural locations that aren't able to connect via traditional fiber or cable
- As a quick-start solution while you're waiting for your primary broadband connection to be installed, or for a temporary location
- As both a fixed wireless solution and a managed failover solution for your existing dedicated or shared internet access solution

Fusion Connect deploys all the necessary equipment and sets up the service, then manages and monitors the network to ensure it's working for you.

Fusion Connect Wireless Broadband access uses IPsec encryption.

## Connectivity

Fusion Connect Wireless Broadband Service allows you to:

- Deliver 100% coverage to all your remote locations
- Open stores and branch offices on time, while you wait for main internet connectivity
- Employ a fully redundant backup solution to ensure business continuity
- Enjoy sufficient bandwidth to support your business-critical applications
- Rely on a single provider for all of your network and security needs

Fusion Connect provides nationwide coverage, including LTE, 4G, and 5G.

## WIRELESS BROADBAND

**Speeds from 5 Mbps to 100 Mbps (or more)**

## THE FUSION CONNECT ADVANTAGE

### ENABLING THE CONNECTED ENTERPRISE

Optimize your business communications, costs, and continued collaboration from any place or device, with crystal-clear quality. Securely connect your business locations and remote workers.

### LEADING-EDGE TECHNOLOGY

Fusion Connect's optimized platforms leverage leading technologies, meaning seamless integration of solutions across your virtual and fixed technology platforms.

### DEDICATED SUPPORT TEAM

Our 100% U.S.-based expert tech support is available 24/7 to keep your business online and available regardless of the situation.
